

IPSO ... anywhere

Imagine the ideal project support app ...

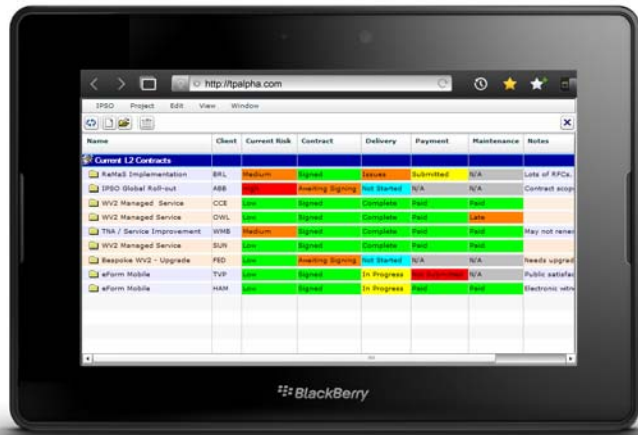

... multi-project planning, scheduling and tracking;
documents linked to project tasks;
integrated time recording; effective configuration control ...

... available anywhere.

No "sync'ing", no export/import, no "cloud" required:
just real-time access to all your project data

Welcome to IPSO:web

Available on laptops, tough-books and Blackberry Playbook
(as well as at the office of course)

Multi-Project Dashboards

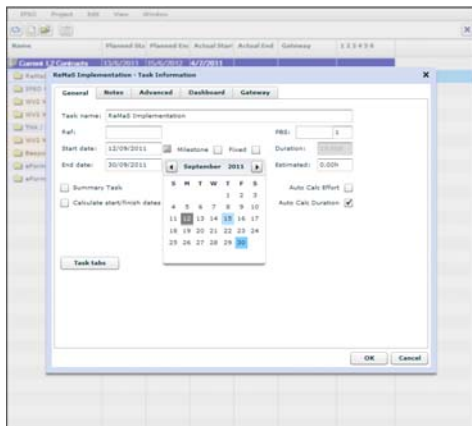

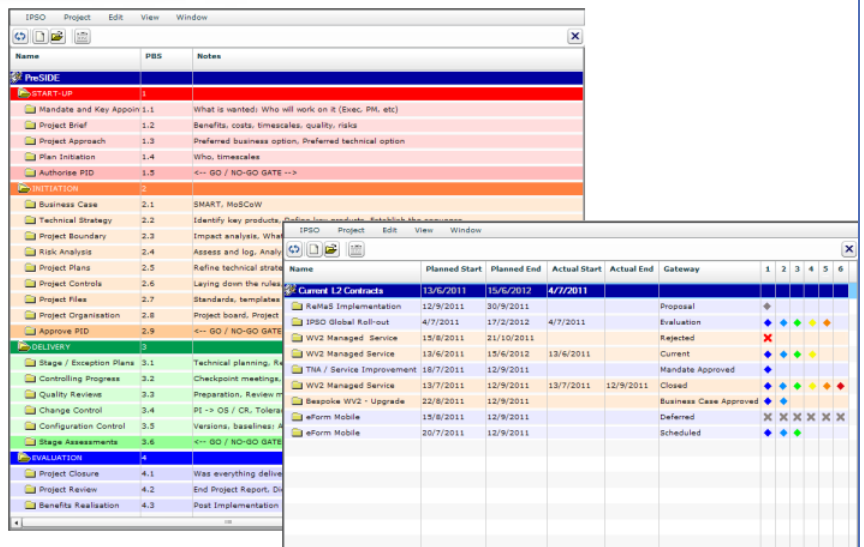

Customised views ensure the right information is delivered to you instantly, enabling you to make informed decisions.

This is a real-time view on your live data, if you see an issue, you have drill-down capabilities to get to the bottom of the problem.

Support for Project Management Methods and Business Processes

Creating projects from pre-defined templates ensures consistency and improves quality.

The tailorability of IPSO means you can manage your business processes in an efficient and effective way – gateway views helps keep your finger on the pulse.

Reactive and Responsive

If there's an issue – you can react immediately by rescheduling, re-deployment or simply re-prioritisation.

Whatever the most appropriate course of action – you have the information and the capability to respond.

Remember: you decide who sees information, and what data can be accessed or amended. You can empower without losing control.

System Requirements

IPSO:web integrates with your standard IPSO database; it requires Microsoft IIS to run the web service.

IPSO:web works with all popular browsers including Internet Explorer, Firefox, Mozilla, Opera, Safari, Chrome and the native Blackberry Playbook browser. It requires flash to be installed on the device.

Getting more information ...

There is lots more information on our web site: www.tpalpha.com

If you have any questions or would like to arrange an on-site demonstration email: sales@tpalpha.com
